ГРАМАТИКА — Units: як рахувати деталі і компоненти

Unit — одиниця виміру для окремих предметів, деталей, компонентів.

Коли ми замовляємо товари або деталі і треба вказати кількість — замість просто числа використовуємо **number + units**:

Без units — менш точно	З units — правильно у бізнес-контексті
<i>I need 300 connectors.</i>	I need 300 units .
<i>Can you deliver 500?</i>	Can you deliver 500 units ?
<i>We only have 200.</i>	We only have 200 units in stock.
<i>We ordered 1,000 parts.</i>	We ordered 1,000 units .
<i>The price is €0.85 each.</i>	The price is €0.85 per unit .

Per unit — за одиницю (ціна за штуку):

The price is €2.50 per unit. — Ціна €2.50 за штуку.

If you order in bulk, the cost per unit goes down.

Units використовується для:

компонентів, деталей, упаковок, пристроїв — будь-чого що рахується поштучно у виробничому або бізнес-контексті.

Не плутай:

pieces — шматки (менш формально, частіше для фізичних предметів)

units — одиниці (формально, виробництво, замовлення, логістика)

Quick practice — fill in: units / per unit / in bulk

1. We need to order 500 _____ of cable connector PC-220.

2. The price is €1.20 _____ for orders under 100.

3. If you order _____, the price drops to €0.85 per unit.

4. I'll confirm 300 _____ for delivery by Friday.

5. How many _____ do you need in total?

6. We always buy components _____ — it saves a lot of money.

Answers: 1. units 2. per unit 3. in bulk 4. units 5. units 6. in bulk
